It currently consists of 28 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as soon as it is available and the accession number will be preserved.

between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

## SOURCE INFORMATION:

Š Ъ Q

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) pBACe3.6

position 1 of RP11-312I3; actual end is at base position 214269 of NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-332A19; the clone sequenced to the right is RP11-11K6. Actual start of this clone is at base to the right is RP11-11K6. Actual start of this clone is at base to the right is RP11-11K6. RP11-312I3.

There are polymorphic base pair differences the clone RP11-31213 and RP11-11K6.

                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers give in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; TI:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP astabases can be found as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk on Nov 16, 2001 this sequence version replaced gi:16605669.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                             IMPORTANT: This sequence is not the entire insert of clone RP11-96C4 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true left end of clone RP11-96C4 is at 1 in this sequence true left end of clone RP11-384P3 is at 170178 in this sequence.
                                                                                                                                                                                                                                                                                                     http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at
sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   94405

It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    125793 125892: gap of 100 bp

* NOTE: This is a 'working draft' sequence. It currently

* consists of 14 contigs. The true order of the piaces

* consists of 14 contigs or the sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

                                                                                            Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 10 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
                                                                                                       Submitted (18-FEB-2000) Production Sequencing Facility, DOE Joi Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, On Apr 25, 2001 this sequence version replaced gi:9099093.

                                                                                                                                                                                                                                                                                                                                          arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely and the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in which they appear is completely appear in the order in the ord
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This record contains 63 individual
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Contact: sequence_submissions@genome.wi.mit.edu

* NOTE: This is a 'working draft' sequence. It currently
* consists of 101 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
